

**Press Release - September 22, 2015**

*For immediate release*

## **Major Announcement**

**Standard Manufacturing Co.** has invented a double barrel pump action repeater shotgun, which can accurately fire 16, 2 <sup>3/4</sup>" shells in less than five seconds. It is designed in such a way, that the recoil is virtually nonexistent and allows your second take up shot to be instantaneous. This new shotgun has already won the Bluebook of Gun values award for innovation. It loads and ejects from the bottom, making it completely ambidextrous with AR type safety's on both sides. It has a special mechanical recoil reduction system, a single trigger firing right and then left barrel.

We are offering to the press, sample guns for testing and evaluation just as long as you provide us with your FFL. This is a completely new, patented design, which should be a great interest to all firearm enthusiast. We also offer a brand new facility, measuring 3 acres on one floor, to manufacture this gun. We would love to invite you to tour our facility, and enjoy a day of shooting.

Please take a moment to watch our video featuring the DP-12 in action:
