

PRESS RELEASE

A revolutionary pocket generator for illumination that allows you to charge electronic devices anytime, anywhere

<ul style="list-style-type: none">• Spanish innovation brings electricity to every corner of the planet
<ul style="list-style-type: none">• Powerspot™: Pocket electrical generation
<ul style="list-style-type: none">• Minimum dimensions
<ul style="list-style-type: none">• Enough power to illuminate numerous LED bulbs and to charge mobiles, tablets, power-banks, rechargeable batteries and other electronic devices

Nuremberg, March 4, 2016 - **Powerspot**™ is a 100% Spanish company dedicated to the development and manufacture of portable thermoelectric generation devices, specifically designed to produce electricity in the simplest manner.

The Powerspot products need only a small heat source and a coolant (water or air) to start generating electricity, no matter what the source: gas, alcohol, wood, coal, etc. Power generation occurs as a result of the temperature differential between the base and the top of the generator, without any moving parts and therefore, without breakdowns or maintenance.

Product range

The **Powerspot Explorer** product range is designed to generate electricity in the harshest environments. It can simultaneously light up several dwellings and charge multiple electronic devices.

The **Powerspot Lanyard**, offers fans of outdoor recreation, adventure, mountaineering, fishing and climbing the possibility to charge electronic devices (mobile, GPS, camera) or to illuminate a tent, wherever they may be and with minimum consumption fuel (gas, wood, coal).

The **Powerspot Thermix** range, based on air cooling, is ideal for continuous power generation without supervision. They are also excellent convection heaters, providing an excellent solution for electricity and heat in shelters, cabins, pleasure boats or tents without any supervision whatsoever.

Powerspot Products:

Lanyard. Characterized by its extremely compact size (fits in a pocket), the devices of the Powerspot Lanyard range are designed for the lovers of leisure activities and outdoor adventure. Cooled by water (or any other liquid), they are available in three versions:

-  **Lanyard+:** up to 10 watts of power. Powers up to 10 Powerspot LED bulbs simultaneously. Charges mobiles, tablets and all sorts of electronic devices.
-  **Lanyard+ Extended:** is the most complete version of the product. The same power as the Lanyard Plus but with triple its autonomy.

Thermix. Designed specifically for rural and mountain dwellings, it transforms the heat produced by any fuel into usable electricity and also raise the ambient temperature of a room in just a few minutes (a 15 degree Celsius increase of a 25 m2 room), making it the perfect instrument for lighting, powering and heating shelters, cabins, pleasure boats or tents.

It is air-cooled, steadily generating 10 watts without any type of supervision. It powers multiple LED lights bulbs and small appliances, charges mobile phones and tablets.

The Mini Thermix version, with dimensions similar to those of a Lanyard +, is equipped with enough power to light, charge and heat up a tent or a midsize dwelling without any supervision.

Explorer. Intended for the most disadvantaged countries, it meets the basic needs of lighting and electricity. It is a sturdy, reliable, maintenance-free and very resistant product, capable of generating a maximum of 15 watts of power, enough to light up small isolated settlements, charging phones and powering electrical equipment.

Micro / Nano. As robust and hardy as the already familiar Lanyard model, but miniaturized to the extreme – 65 mm diameter, 85 mm high, 290 grams of weight – designed to charge and illuminate anytime anywhere, however remote it may be, with no spare parts or maintenance necessary.

With this release, Powerspot responds to the need in the Outdoor market for available electrical power anywhere with a size and a weight as reduced as possible.

Just like its older versions, it charges phones, smartphones, tablets, rechargeable batteries, lights up LED Powerspot "Water" lightbulbs as well as any USB bulb. Ideal for lighting up a tent, a cabin or a mountain retreat. It comes in red or black versions.

About Powerspot

Pioneer in the manufacture of user-end portable thermoelectrical generation devices. Powerspot is the first 100% Spanish enterprise specialising in the development of miniaturised power generation solutions, designed for uses where the electrical network is inexistent or inaccessible, anytime, anywhere, using any fuel and that are maintenance and repair free.
