Press Release

New Tayline 5.0™ Field Boots From Grub's

New from Grub's is the Tayline 5.0 field boot which offers a new level of performance footwear ideal for agricultural and leisure activities including field sports.

The Tayline boots boast a high rubber shaft with self-insulating neoprene upper and hard toe technology making them great for working conditions on the farm.

The boots also mark the introduction of the new Trak™ sole featuring Hexzorb™ shock absorbing technology to give ultimate grip on a variety of surfaces. The tread is designed to work with the action of the foot, the V shaped tread cuts in to soft ground, mud and snow giving ultimate grip.

The boots are both waterproof and insulating with lightweight easy clean rubber shell over the foot, additional rubber calve protection and full stretch shafts, giving maximum comfort and fit for most calve sizes.

Lined with a Super-Dri™ moisture wicking terry knit lining, the boots keep the wearer dry and comfortable in a range of temperatures from -10°C to 30°C for a prolonged period without sweat and heat build-up.

All boots feature a removable 6mm Nitrocell™ footbed that adds further insulation and cushioning giving the wearer superior thermal protection from cold surfaces.

The Tayline 5.0™ boots are available in Moss Green in UK sizes 4-13. They are priced at £89.95.
