Press Release

New Rainline™ Boots from Grub's

Splash around this winter in the new Rainline high performance field boots from footwear experts Grub's.

The Rainline boots combine Grub's unique Superdri™ technology in a lightweight easy clean rubber boot ideal for wearing all year round.

The new technology works seamlessly to provide a new level of performance footwear and the Rainline boot comes in a variety of colours.

The boots feature a full stretch neoprene panel in the shaft, giving a comfortable fit for most calf sizes.

Its moisture wicking lining uses thousands of fibre loops which cosset the foot and wick away moisture keeping feet dry and comfortable to provide an unequalled comfort range without sweat and heat build-up.

Grub's Rainline boots also feature a removable 6mm Nitrocell™ footbed that adds further insulation and cushioning due to its microscopic closed cell nitrogen bubble structure, giving the wearer superior thermal protection from cold surfaces.

The boots are shod with the Trax™ outsole which features the Hexzorb™ shock absorbing component giving superior grip and comfort on a variety of surfaces. The tread is designed to work with the action of the foot into zones for grip, traction, stability and braking.

Grub's Rainline Boots are available in Navy, Sage Green, Aubergine, Fiji Blue and Pink in UK sizes 4-13.
