

PRESS RELEASE #1 - 1 MARCH 2016

NLT Develops New RWS Configuration for its IronFist™ Weapon System...the 12BV Vertical Tower

.... for mounting **IronFist™** Less Lethal Launcher Systems on Remote Weapons Stations with controls and power provided through the slip ring. These **12BV** systems are available with either 38mm or 40mm barrels to fire the full range of commercially available Less Lethal munitions as well as high capacity **Hi-Load** munitions developed specifically for the **IronFist™** systems. This new configuration can be a totally dedicated **Civil Disturbance platform (with 3 of the 12BV)** or **Enhanced Firepower platform (with 2 of the 12BV)**, when used with the M2HB and M249 machine guns to provide “escalation of force” capability. This combined firepower gives Police Special Operations or Military Police units the ability to face any escalating threats in urban operations with a single weapons platform.

The **IronFist™** and our full range of **less lethal and tactical munitions** will be on display at the **NonLethal Technologies Booth 9-515 in the Law Enforcement Hall at IWA, Nuremberg, Germany March 4-7, 2016**
