

PRESS RELEASE 1 MARCH 2016

NonLethal Technologies Develops New Tactical Conversion Weapon Set to replace older and unused 76mm Screening systems mounted on tactical vehicles currently in service, with a more adaptable, mission specific, 38mm or 40mm IronFist Set of Two 6bbl Launchers specifically designed for crowd control operations.

.... The Ironfist 76R Set replaces and mounts on the same platform footprint of the 76mm Screening system once disassembled from the Remote Weapons Stations. The IronFist 76R systems are available with either 38mm or 40mm barrels to fire the full range of commercially available 38mm or 40mm Less Lethal munitions as well as NLT's high capacity 38mm munitions developed specifically for the **IronFist™** systems. **With no modification**, this new conversion set can be a totally dedicated **Civil Disturbance platform** with a total of 12 barrels, and controlled from within the cab, using the existing wiring and fire control system that was used to fire the 76mm system previously

The **IronFist™** and our full range of **less lethal and tactical munitions** will be on display at the **NonLethal Technologies Booth 9-515 in the Law Enforcement Hall at IWA, Nuremberg, Germany March 4-7, 2016**
