

New products and attractive co-exhibitors

## **Waffen Ferkinghoff presents novelties at IWA 2016**

**Nuremberg, 03th March 2016 –Waffen Ferkinghoff GmbH & Co. KG, Würzburg, will introduce themselves together with their US-Partner Kahr Arms at IWA this year on the new booth in Hall 1-438. In these four days the wide range of Ferkinghoff will be shown to the national and international dealers. It is the first time to exhibit for the manufacturers Kimber and Meprolight on the booth of Ferkinghoff. Retailer visitors are invited to get informed about renowned products and a lot of novelties.**

Whether for hunting, sport or security – the program of Ferkinghoff offers well-known brands and strong-selling products of modern or history long and hand guns; optics; accessories like grips, holsters, magazines or even complete cleaning kits or targets. The visitors can expect a series of innovations and popular products on the booth.

Since several years the KAHR Firearms Group presents together with his general importer for Europe – Waffen Ferkinghoff – their products at IWA. The portfolio includes all Kahr Premium custom guns also the Magnum Research products like the Desert Eagle Pistols, the BFR revolver, the MagnumLight self-loading rifles and the Auto Ordnance range including all accessories and weapon parts.

### **Novelties from KAHR Firearms Group**

Kahr Firearms Group company is showcasing several new incarnations of the Company's own legendary Desert Eagle pistol, now long being 100% manufactured in the United States after having been made under license in Israel for a long time.

Distributor for Magnum Research and all products of Kahr Firearms Group in Europe is the German-based company Waffen Ferkinghoff ([www.waffen-ferkinghoff.com](http://www.waffen-ferkinghoff.com)). The information on the website is available in English and German: the company is shipping firearms more or less worldwide.

### **Magnum Research -new Desert Eagle Lightweight models L5 and L6**

For some shooters handling has always been an issue with the big Desert Eagles. The new Desert Eagle L models are about 350 grams lighter than their standard counterpart. That's a big improvement for the handling of the pistol.

The L5 being chambered in .357Magnum and feeding through 9-rounds magazines, while the L6 model fires the .50 Action Express round and uses a 7-shots magazine – are slightly lightened and shortened variants of the design, featuring an integrated compensator to reduce recoil and muzzle climb due to the heavy caliber: the Desert Eagle L5 is just over 25 centimeters long, while the L6 is around 27 centimeters long.

### **Magnum Research® Desert Eagles® in All Stainless Steel**

A year has passed since Magnum Research first introduced the .50AE Mark XIX pistol in stainless steel. Now, the company is proud to announce the much anticipated introduction of the stainless steel Desert Eagle in .357 and .44Magnum.

Both the Mark XIX Desert Eagle .357 and .44Magnum are offered in an all stainless steel construction of the frame, slide, barrel and rail and is accented with attractive black appointments. Both models have a 6" barrel and an integral muzzle brake which will replace

the add-on brake which Magnum Research offered for a number of years. With the new integral muzzle brake, it offers significant recoil reduction, less muzzle flip and an attractive streamlined appearance. In addition, because the overall length remains the same as the standard 6" barrel model, the same holsters will fit these models. The .357 and .44Magnum also features a new picatinny bottom rail for accessories.

"When we introduced the first stainless steel Desert Eagle Mark XIX in .50AE last year, the demand was overwhelming and it was difficult to keep up with that demand" says Frank Harris, VP of Sales and Marketing. "Unquestionably, the Desert Eagle Mark XIX series is the most popular handgun that Magnum Research manufactures, and now, in stainless steel, the .357 and .44Magnum, as well as the .50AE, look more commanding than ever before."

### **Magnum Research® Cerakote™ Tungsten Desert Eagle®**

Once again, USA based Magnum Research is introducing another new version of the iconic Desert Eagle with the addition of their new Cerakote Tungsten to the .44Magnum and .50AE Desert Eagle products.

"Over the past couple of years, we have added Stainless Steel, Burnt Bronze, even animal prints to our Desert Eagle line, but now we have upped the image with this very commanding dark gray graphite color called Tungsten. The new color really puts the "muscle" into the look of this powerful handgun." says Frank Harris, VP of Sales and Marketing. "The overall look has a military feel about it which really appeals to many gun owners."

The Cerakote coating is a multi-step process which results in a high temperature ceramic coating that holds up well under normal use. The Tungsten model is complemented with attractive black appointments which gives the pistol even more appeal.

### **New Walnut Stock for Magnum Research® .22 Semi-Auto Rifles**

Magnum Research, Inc. (MRI) has upgraded their Magnum Lite® .22LR and .22WMR semi-auto rifles with a new Barracuda American Black Walnut gun stock. The new stock replaces the heavier laminate stocks which included: Barracuda Pepper, Nutmeg and Forest Camo.

The Magnum Lite MLR22BW and MLR22WMBW with the black walnut stock includes: a lightweight thumbhole design, a comb height designed for comfort and a height that easily accommodates optics. It also features a semi-palm swell of both sides of the pistol grip and a molded-to-fit rubber butt plate. The polished walnut stock gives the .22 rifle a sleek, impressive new look. Both rifles are 100% made in the USA.

The new rifles will be equipped with the Magnum Lite® revolutionary patented graphite bull barrel, exclusive to Magnum Research. The patented uni-directional graphite fibers, parallel to the bore axis, result in a barrel with 6x the stiffness of the equivalent weight of steel. The lighter barrel weight (from 13-16 oz. depending on barrel length) is easier to handle and will dissipate heat up to 43% faster than steel. The result is extremely accurate rimfire performance in both .22LR and .22WMR.

Additional features of the MLR22 include: .22LR and .22WMR Bentz target chamber designed specifically for semi-automatics, full floating barrel for maximum accuracy, CNC machined receiver from 6061-T6 aircraft aluminum forging with an integral Weaver-type rail for optics, and a black anodized finish.

## **Kimber presents new products during the IWA Show**

Kimber is one of the best known manufacturers of 1911-type semi-automatic pistols and market leader in classic hunting rifles in the US. Together with his German Distributer Waffen Ferkinghoff in 2016 the Kimber Team will exhibit their new products during the IWA Show in Nuremberg.

### **Kimber® K6s™**

New from out there is the K6S pocket-size defensive double-action revolver – the company's first ever, and one of the best in its field. Entirely manufactured out of stainless steel and conceived for personal defense and concealed carry, the Kimber K6S revolver holds six rounds of .357Magnum despite remaining totally lightweight and extremely compact – possibly the smallest .357Mag. Revolver available on the market today.

Standard features of the Kimber K6s revolver include: 6 round capacity; Stainless steel frame; barrel and cylinder; Light, smooth double-action trigger pull; Shooter-friendly ergonomics with push button cylinder release; Small and light (2-inch barrel and weights just 23 ounces); Serrated back strap.

### **Kimber® Custom II™ (Two-Tone)**

Getting back to basics never looked so good. This new foundational addition to the Kimber 1911 product line continues to offer the unrivaled standard features that all Kimber 1911s are built upon, while also featuring new finishes and accents that make these pistols the best value offered by any firearm brand to date.

Standard features of the Kimber Custom II (Two-Tone) include: Brushed polished carbon slide; Smooth, checkered rosewood grips; Match grade stainless steel barrel; Metal mainspring housing.

### **Kimber® Super Match II™**

The best just got better with all new features on Kimber's flagship 1911, the Super Match II. Straight out of the Kimber Custom Shop, the Super Match II takes quality to the extreme and is only intended for shooters who will not settle for anything but the best.

Standard features of the Kimber Super Match II include: Accuracy guarantee of 5 shots, 25 yards, 1.5-inch group or less; Serrated flat top slide; Aggressive cocking serrations; Rear of slide serrations; Rear adjustable target sight.

### **Kimber® 84M Hunter™**

Classic Lines, Kimber Craftsmanship. Meet the rifle that will become your most trusted tool on your next hunt: the Kimber Hunter. This American-made rifle features a lightweight stock, match-grade adjustable trigger and a removable box magazine that allows for quick and easy loading and unloading.

Standard features of the Kimber Hunter include: Sub MOA Accuracy Standard – 3 shots, 100 yards, 1-inch group or less; Weighs under 6 lbs.; Mauser-style controlled round feeding; Stainless steel barreled action; 3-position wing safety

**Kimber® Mountain Ascent™**

A true mountain rifle must be light and accurate. Hardcore hunters understand this. The Kimber Mountain Ascent was developed specifically for the experienced hunter. Mountain Ascent is the lightest production rifle ever offered, delivering legendary Kimber accuracy yet with a weight starting at 4 pounds, 13 ounces.

Standard features of the Kimber Mountain Ascent include: Sub MOA Accuracy Standard – 3 shots, 100 yards, 1-inch group or less; Starting weight is 4 pounds, 13 ounces; Mauser-style controlled round feeding; Stainless steel barreled action; 3-position wing safety.

**MEPROLIGHT Optics - has its premiere during IWA with Ferkinghoff**

The manufacturer **Meprolight** is back with his famous optics on the European market after a long time. The products of Meprolight will be introduced to the visitors on the booth of Waffen Ferkinghoff. The optics Mepro M5, Mepro X4 and all sights will be presented to the German market.

**MEPRO M5 Red Dot Weapon Sight**

The MEPRO M5 Red-Dot Sight is an energy-efficient, compact sight that provides thousands of operating hours while utilizing a single "AA" commercial battery. Featuring battle-proven LED technology and rugged MILSTD design, the sight assures reliability under the harshest environmental conditions.

With its large display window and clearly-defined Red-Dot, the MEPRO M5 ensures rapid target acquisition with both eyes open. Offering four easily switchable reticle brightness intensities, the MEPRO M5 fits every tactical scenario. To facilitate night operations and long-range target engagement the MEPRO M5 is compatible with GEN II and GEN III NVGs as well as with Magnifying Scopes. Its human-engineering allows positioning of NVGs and Magnifiers close to the sight's optics with no decrease in the field-of-view and without compromising convenient switch operation.

**MEPRO X4 Day Scope with x4 Magnification**

The MEPRO X4 is a fixed x4 magnification, compact and lightweight, telescopic day sight. Utilizing a quick release Picatinny adaptor, this MIL-STD sight provides five different brightness settings for efficient target acquisition in any tactical situation. Energy efficient, the sight operates on a single battery and features auto shut-off after one hour. The MEPRO X4 is an extremely robust and easy-to-use tool, ideal for modern combat operation.

**Meprolight Self illuminated night sights**

Meprolight combat proven; self-illuminated night sights give the possibility to hit stationary or moving targets under low-light conditions with dramatically increased hit probability.

Test results by marksmen and journeymen level shooters have shown an increase of over 85% in hit efficiency, using MEPROLIGHT self-illuminated. TRU-DOT® models offer a handgun sighting system for improved rapid instinctive aiming which requires no transition from day to night use.

Day and night, the shooter's aiming reference is three solid dots, identical in appearance and location under all light conditions. Designed as replacement parts for the standard weapon sights, MEPROLIGHT'S Self-Illuminated night sights can be mounted directly with minor modifications. Superior production methods and rigid quality control have made MEPROLIGHT the first choice among law enforcement agencies, defense decision makers and major weapon manufacturers.

## **TIMNEY TRIGGER announces its brandnew series of two-stage triggers**

Established in 1946 by Allen Timney, Timney Triggers was founded on the need for easy-to-install, single-stage triggers for shooting enthusiasts sporterizing military rifles in the post-WWII era. Allen built triggers for bolt-action rifles such as Mausers, Springfields and Enfields and Timney quickly became known as the aftermarket trigger company for bolt-action rifles.

Pigs may not be growing wings but after nearly 70 years of making best-in-class single stage triggers, Timney announces today its series of two-stage triggers. The new series will initially include the AR Targa 2-Stage and the 2-Stage Straight trigger engineered for Remington Model 700 rifles.

**The new Timney AR Targa 2-Stage Trigger** is a self-contained, 100% drop-in unit that is ready to install in your AR-15 for an exceptionally smooth, crisp, two-stage trigger pull. No gunsmithing, fitting, or adjusting required.

The pull weight is factory calibrated for a three-pound first stage and a two-pound second stage. The trigger housing is constructed of military grade, 6061 T6 alloy that is CNC machined using state-of-the-art robotics and is anodized for superior durability. The hammer is wire EDM cut from S7 tool steel, combining hardness to resist wear with superior impact resistance to withstand heavy use without chipping or breaking and is Teflon-nickel coated for lubricity. Other components are wire EDM cut from A2 tool steel, then heat treated to Rockwell 58 for long lasting, dependable service life. The Timney AR Targa 2-stageTrigger installs using your rifle's original hammer/trigger pins – our proprietary design eliminates pin rotation and walkout.

Timney Triggers has been making replacement triggers for **Remington Model 700** rifles for over fifty years. The new Timney **2-Stage Straight trigger** is the latest model in that series. The pull weight is factory calibrated for an eight-ounce first stage and one -pound second stage (the second stage is adjustable from 8-ounces to 2.5-pounds of pull weight).

The 2-Stage Straight trigger features machined and hardened steel work surfaces milled from A2 tool steel and all three sears are Teflon-nickel coated for added lubricity. The trigger housing and shoe are CNC machined using state-of-the-art robotics and the sears are EDM cut from high-grade solid steel. The trigger housing utilizes an anodized aluminum body and the trigger shoe and safety are carbonitrided which dramatically increases the surface hardness and wear-resistance properties of the metal.

The Timney 2 Stage Straight Trigger is easily installed with no screws, drilling, or tapping required. By simply removing existing pins, replacing trigger, and inserting existing pins anyone can replace a trigger on their Remington 700

## **Quality Optics from TRIJICON – New Optics MRO und VCOG**

Trijicon has led the industry in the development of superior any-light aiming systems since the company founding in 1981. World-Renowned for its innovative applications of tritium and advanced fiber optics, Trijicon manufactures the most advanced riflescopes and sights for tactical and sporting applications.

### **Trijicon launches the new MRO™ - Red-Dot Optics**

Trijicon® takes the science of the red dot sight to the next level with the Trijicon Miniature Rifle Optic or MRO™, a red-dot sight tough enough for combat, the mean streets of law enforcement, competition shooting or hunting in the harshest of environments. Light and rugged, the Trijicon MRO mounts easily, zeros quickly and adapts to almost any shooting scenario.

With its large objective lens and shortened optical length, the MRO virtually eliminates the “tunnel vision” or tube-effect common to so many red dot sights. The 2 MOA dot is bright and crisp, and is perfectly sized for fast target acquisition at CQB distance out to extended ranges. The MRO features eight brightness settings, including two that are night vision compatible, plus one extremely bright setting for use with lights or in very bright outdoor conditions. And, it gets an amazing five (5) years of continuous use on a single 2032 battery.

Half-minute adjustments with 70 MOA total travel allow for zeroing in most any configuration on a variety of platforms. What’s more, no special tools are required - windage and elevation adjustments can be made even with the rim of a 5.56mm casing. The brightness control atop is ambidextrous, so your shooting hand need not leave the fire control area. The MRO is parallax free, with infinite eye relief for quick and accurate engagement no matter your position.

Trijicon engineers built - and tested - the MRO to operate in temperatures ranging from -60F to +160F. Waterproof to 100 feet, chemical and corrosion resistant, and housed in 7075-T6 Aluminum, the MRO can withstand the rigors of combat, sub-zero mornings on an ice-encrusted hunting stand or bouncing between stages during a competitive shooting event. The MRO. A compact and rugged aiming solution, perfect for real-world operators who need to get the job done - fast and accurately.

### **Trijicon® VCOG™ 1-6x24mm Riflescope**

Trijicon has combined the legendary toughness and function of its combat-proven ACOG and associated ballistic reticles with a new variable optic. The new Trijicon VCOG (Variable Combat Optical Gunsight) 1-6x24 mm meets the rigorous demands of duty or competition while giving shooters the flexibility to engage CQB targets and out to the maximum effective range of most service rifles.

Designed and built in the USA, the Trijicon VCOG is machined from a 7075-T6 aluminum forging and given a Mil Spec, hard-coat anodized finish. There is a full 90 MOA of windage and elevation adjustment available in ½in / click increments @100m to get almost any weapon system on target.

Lenses are all fully multicoated with a broadband anti-reflective coating that maximizes light transmission while meeting and beating the military’s requirements for abrasion resistance. The scope maintains a constant four inches of eye relief throughout its magnification range and an oversized and knurled adjustment knob makes finding the perfect power setting easy and fast, even with gloved hands.

Before its debut, the VCOG underwent rigorous shock and vibration testing to assure it met the standards of a Trijicon brand optic. The VCOG is waterproof to 66 feet and its illumination electronics are Mil Spec tough. Extra-thick tube walls give the VCOG a toughness advantage over its more fragile competitors. Also tested for smoothness and long-term durability, was the optic’s magnification system - the VCOG offers shooters an outstanding service life under the most rigorous conditions.

The red illuminated reticle is powered by a common AA battery, accessible underneath the objective, delivering 700 continuous hours of runtime at setting 4 of 6 with a lithium battery. A rheostat is located on the main tube, opposite the windage turret, and has an off position between each of its six brightness settings. An integral mount securely pairs the optic with any M1913 Picatinny rail and its height is perfect for flattop M-16, M4, AR-15 and SR-25/AR-10-style rifles. Two slotted screws secure the optic to the rail. At just 10 inches, the VCOG leaves plenty of rail space ahead of the objective for night vision or thermal intensifiers.

### **More new brands and products in the portfolio of Waffen Ferkinghoff**

The **Stealth Operator Holster**, manufactured by Phalanx Defense Systems, USA, is the world's first true multi-fit holster series, requiring no adjustment to fit over 70 unique pistol models. The simple, no gimmick approach to the design offers the multi-gun user a durable and reliable product that is 100% made in the USA. The technical Specifications are high strength injection-molded nylon construction, rust-resistant black oxide hardware, fits over 70 different handguns (and counting!), available in black, coyote, OD green and pink.

**Full Size** or **Compact** holster fit for most of the Glock, Taurus, Ruger, Smith & Wesson, Springfield Armory, H&K, Beretta and Sig Sauer models and many more.

The **Twin Mag**: double stack magazines for most Glock handguns, such as 9mm models, .40 caliber models, .45 GAP models and .357 SIG models. In addition, it fits hundreds of other magazines using similar dimensions.

### **WOLFF Gunsprings - manufacturer of precision springs for firearms**

Portfolio covers recoil springs, hammer springs (mainsprings), magazine springs, firing pin springs, striker springs, trigger springs as well as many other firearm springs.

Springs are available for hundreds of different models including many vintage weapons. The proprietary spring material and processes provide you with high quality, reliability and proven performance not found with most other springs. Wolff Gunsprings builds on exclusively experience of 60 years with firearm springs.

This all is just a summary of 120m<sup>2</sup> conversation piece which is to find on the new booth in hall 1-438 with a lot of exciting impressions and interesting products for the own portfolio of the retailers. "Our range of product supplies an extraordinary and lucrative expansion for the product portfolio of the dealers who will benefit in each case by visiting our booth", says CEO Achim Ferkinghoff. The Team of Waffen Ferkinghoff is looking forward to all the interesting visitors and personal conversations.

**About Waffen Ferkinghoff GmbH & CO. KG**

Passion. Competence. Service. These values stand for today's corporate identity of Waffen Ferkinghoff GmbH & Co. KG. Within the last 25 years Waffen Ferkinghoff has become well-established as a steady player in a changing market. The Würzburg-based, expanding company has written its success story in an unusual but distinctive way.

Waffen Ferkinghoff emerged from a small retail store and has grown into a nationally and internationally successful wholesale and retail business for sports, hunting and security equipment. Moving to its own premises in 2014 laid the foundations for continuous expansion and distributorship of further leading US brands. Representing a wide range of renowned US, Italian and German brands, Ferkinghoff supplies its national and international specialized retail partners with interesting and best-selling products.

The team of the family-run business is known as a reliable and competent partner. Long-term customer loyalty results from Ferkinghoff's professional consulting, sales support and good product availability. Maintaining an ongoing dialogue with manufacturers, specialized trade, associations, hunters and shooters, Ferkinghoff constantly optimizes its range of products and offers. General Manager Achim Ferkinghoff considers this to be the biggest challenge for the future of the industry.
