8X internal focus division of lighting control rifle scope

①Our products set of the telescope, distance measurement,handwheel automatic locking,Wind correction,ballistic correction, Red and green light free to switch, Light intensity automatically adjust,Reticle optical fiber lighting and other functions in one. With the rapid capture of target, Aiming at high precision,long-term use of five non (no mold, no fog, no dust, no corrosion, no corrosion) to meet the requirements of optical system for high zoom ratio.And,Scope can meet the strong and weak light normalization function.

Main Specifications: Magnification 5-40,Objective Diameter ϕ 56+0.1(mm), Ocular Lens Diameter ϕ 34+0.1(mm),Field of View 3.5° ,Resolution5" , Focus Type:Side focus,Type of Reticle:Mil-Dot,Movement,Windage>30' Movement,Elevation>30' .

Competitive advantage with similar products (services):

Only two companies in the world have developed the 8x zoom ration products. Mlandoptics of china and SWAROVSKI of Austria.SWAROVSKI only comes with the 1-8 magnification products.However,We are the unique company,It is able to independent research and development, Self-production assembly and mass market the 5-40 magnification products in the world.

②Mland optics has achieved the absolutely leading position in domestic. A few of technologies are world leading and have achieved some international awards.

2003 years, China gold product award on gun show of European Union (UK)

2004 years, Crown award of British international invention expo

2007 years, The best product award for riflescope that recommended by the authority magazine of us shooting movement

2007 years, The best optical product award and gold medal award for NRA

2008 years, The best product award for riflescope that recommended by the authority magazine of UK shooting movement

2009 years, Champion product award of Poland and Britain outdoor shooting target

2010years, Women's champion award of the Poland outdoor shooting target

At this moment,Mlandoptics is the unique company in china which can produce the FFP 1-6x24 with fully multi-coated lense and 92% light transmission!
