

Trail camera new research target--Mother-daughters camera

Boly Inc. was established in 2002. The company has three subsidiary companies in California, Shenzhen and Hong Kong and has filed over 90 patents covering broad areas of Imaging and clean tech. Boly manufactures digital scouting cameras, auto-focus camera modules for cellular devices, security cameras.

Now we are working on mother-daughters cameras to weave a trailing net for better outdoor activity trailing experience.

Mother-daughters are a group of camera systems. They could work alone, and work together. Daughter cameras give feedback to mother camera what they take. So when you check mother camera, you are checking all the cameras.

To get more understanding, welcome to our booth Hall 6-143.
