UTG ACCU-SYNC™ Scope Rings

Precision Machined and Tuned to Perform

Leapers UTG is proud to announce our ACCU-SYNC™ series of MIL-STD-1913 Picatinny scope rings. Constructed of 6061-T6 Aircraft Aluminum and uniformly finished in a non-reflective matte black anodize this series of scope rings is sure to become a new favorite amongst our customers. The ACCU-SYNC™ scope rings are available in 1", 30mm, and 34mm scope tube compatibilities and each feature different optimized offset distances suited towards many of the different modern sporting rifles that are out there. Twelve different models round out the series and share the same key features that set the ACCU-SYNC™ scope rings above and beyond the rest. When choosing these scope rings for their modern sporting rifle, customers will enjoy distinctive lightening cuts made throughout the scope ring's base. Many will be so surprised at first when picking up their ACCU-SYNC™ scope rings at how lightweight they are; that although aesthetically pleasing to the eyes, the lightening cuts were deliberately designed, engineered, and executed to dramatically reduce overall weight without compromising structural integrity or the performance of the scope rings down range.

To ensure a continuously reliable and repeatable zero hold the upper and lower ring portions and the inner diameter they share adhere to strict tolerance control measures and manufacturing procedures during every step of the progressive CNC machining process of every individual ACCU-SYNC™ scope ring. A full length locking plate secured by quality Torx screws and a bottom base equipped with integral square-shaped recoil stops securely clench onto MIL-STD-1913 Picatinny rails eliminating the majority of any forward and rearward movement that occur during recoil. Along with functional lightening cuts, all edges and corners have been chamfered to prevent snagging, scratching, and or tearing of other gear and provide effortless access to the scope windage and elevation turrets when making critical adjustments. Make your next fine-tuned choice for top level performance with ACCU-SYNC™ scope rings. Accuracy synchronized.

Visit our company website, www.leapers.com, or drop us a line at 734-542-1500, for up-to-date product information and release dates on our continually expanding product lines, ranging from our Michigan born UTG PRO Made in USA rail systems and mounts, extensive line of flashlights and lasers, parts and accessories, to our popular gun cases and other soft goods.

ABOUT LEAPERS, INC.

Leapers, Inc., headquartered in Michigan, U.S.A., has been in the business of supplying shooting, hunting and outdoor gear since 1992. We set un-compromised high standards for all of our business operations. Our goal is to provide a total solution for any line of products we offer and we aim to offer the most complete selection of accessories for your one-stop shopping experience. In 2009, we made an important decision and started our Made-In-the-USA Manufacturing Operation. Following our vision with persistence, we created the UTG PRO line of products starting from innovative rails and stocks with plans to make scopes and lights. We use local vendors for a variety of services and bring jobs back to Michigan. In the past 2 decades, Leapers UTG has enjoyed
