

Being Norica a company focused on performance and reliability, all three models as well as all its components are designed and manufactured in Spain.

The **Dream Max** model is a break-barrel springer adult air rifle. Powered by the extensively tested Norica German steel mainspring, it features a 355mm steel-rifled barrel that integrates an anodized aluminum suppressor with SilentShot technology. The anti-shock fiber stock is ambidextrous with scale-shaped texture on grip and forehand, additionally the grip has a convenient storage compartment (see picture). Sighting is easy and accurate with the included 4x32 Norica scope and mounts, designed to withstand the double recoil of magnum springers.

The **Hawk GRS Elegance** is a restyling of, probably, the best Norica air rifle. Featuring a laminated finish beechwood stock, it is powered by the reputed Norica GRS, which is both consistent and powerful reaching velocities of 1100FPS in .177. Such power is tamed by a high-tech elastomer dampener which absorbs 40% of the endured impact, the RAS technology. The Hawk GRS Elegance sports the NATS trigger, which is a fully adjustable unit in travel and pull (factory set at 2,2lbs).

The new **Dragon SilentShot** brings the classic Norica model to a new level. Not only the SilentShot technology has been included for a more discreet use but also the ambidextrous synthetic stock goes through a special treatment, which provides a softer texture while adding increased protection to its surface. With its verified power and accuracy, the Dragon SilentShot will fulfill the needs of those looking for a proven open-sights powerful springer with low noise level.
