

Electrooptic Ltd. is a leading manufacturer and designer of electro-optical devices since 1996.

The company produces and offers more than 30 various products as of today.

Our products are represented in 2 main categories, designed for different market areas.

The first category belongs to scientific research and incorporates infrared viewers. The main consumers of these products are universities, R&D centers as well as the companies related to optical and laser technologies and products. The superior quality and competitive advantages of these products are proven and well known all over the world.

The second category belongs to night vision optics and includes conventional night vision devices, thermal images and digital night vision devices. One of the latest and the most innovative optoelectronic achievement is a “smart” series, based on the up-to-date and advanced digital technologies. The main customers of these products are security authorities, custom institutions, Civil Defense institutions, security agencies and individual hunters.

Electrooptic Ltd. always strives to design and produce the highest products ever possible as well as expand the existing ones and enter the new markets; therefore we renovate our design-and-production facilities and motivate each employee for diligence and responsible attitude to execution of job duties.

*The design-and-production process of **Electrooptic Ltd.** incorporates all necessary process steps, ranging from research activities and going further to development and implementation of design documents, preparation of production facilities, optics and spare parts, metal processing, up to manufacturing of ready-made products.*
