

When a simple thing becomes Smart...

We decided to collect state-of-the art developments in the field of optics, security supervision and hunting, and join them together. However, it's not just a collection of unnecessary functions and options, covered with marketing slogans...NO. It must work! Simply, smoothly and reliably. That was an idea that took precedence over the creation of a new standard for all optical devices in the near future. That's how the SMART series was born, being an ultimate choice due to its unrivaled functionality, decent design, compactness and reasonable price.

We are the first who implemented and combined such useful functions as Wi-Fi, GPS, Magnetic E-Compass, Digital Video Recorder with SD/microSD card up to 32 GB, Laser Rangefinder, Proximity Sensor and many other things in our best-in-class thermal devices, such as binoculars, monoculars and scopes.
