

# Professionals care for their weapons with BRUNOX®

BRUNOX® is “**AT IT’S FINEST**” high-tech, whether BRUNOX® GUN CARE, ideal for cleaning, lubricating, and conserving the barrel, or BRUNOX® LUB&COR®, the 4-fold corrosion protection test winner, or BRUNOX® CARBON CARE, the ingenious maintenance and care product for all carbon gun components.

For regular gun users, BRUNOX® Gun Care is an excellent barrel cleaner and anti-corrosive agent, as well as a good lubricant.

For those who carry their guns in the rain or snow, whether hunting or on duty (rangers, security, police, or military), it is best to conserve them with BRUNOX® LUB&COR® inside and out, because this high-tech anti-corrosive agent guarantees lasting protection from pouring rain, snow, salty climates, and high humidity.

For collectors and armourers as well, BRUNOX® LUB&COR® is the perfect choice to conserve guns for up to 3 years in dry spaces, meaning they are ready to use again in no time at all. Because the weapon only needs to be rubbed down with a cloth and the barrel cleared out. BRUNOX® LUB&COR® is also successfully used in the weapon production of J.P. Sauer & Sohn.

The best and most important aspect for every hunter, police officer, security guard, and soldier is that the weapon is well-protected from environmental influences and at the same time always ready to fire. BRUNOX® GUN CARE as well as BRUNOX® LUB&COR® guarantee no erring shots due to oil or grease if the barrel is conserved only with a soaked cloth / felt stopper after cleaning.

BRUNOX® weapon care is available as a spray & pump-sprayer, in a dropping bottle, or in a handy humid cotton cloth.

BRUNOX® LUB&COR® is available as a spray and in a dropping bottle. It’s the sustainable lubricant for the trigger and slide of semi-automatics, etc. Just give it a try and you will be enthused by your firearm’s great firing behavior.

BRUNOX® LUBRI-FOOD® is the high-tech knife care product that is also used during the production of VICTORINOX®.

At the IWA 2018, BRUNOX® CARBON CARE will be unveiled for the first time. This product will satisfy any carbon manufacturer and processor and, of course, every “carbon owner”. BRUNOX® CARBON CARE protects against fouling, weather-related lime spots, and unpleasant sweat prints. Additionally, it provides care and conserves adjacent anodised metal or aluminum and keeps humidity out.

## BRUNOX® Gun Care

- simple – inspired – efficient

The ultimate gun oil & cleaning product for every type of gun including semi and fully automatic weapons, e.g. gas regulators, etc.

Recommended and used by prestigious European ammunition and arms manufacturers.

- Removes powder, lead, copper, nickel and gunpowder residue
- Disperses moisture and protects against corrosion
- Lubricates all moving parts
- Non-oxidizing and free of ammonia, acids, silicone, PTFE and nanoceramic particles

BRUNOX® Gun Care makes cleaning your guns a pleasure.

Intensive cleaning can be done either straight away or later on, whenever you have time and feel like doing it. After use during the hunt, for sport or for professional reasons, quickly rub down the weapon with the BRUNOX® gun care cloth to neutralize hand perspiration, moisture or other forms of external soiling immediately. If the gun was exposed to wet weather (rain or snow), spray on BRUNOX® Gun Care and rub down with a cloth. This guarantees that all types of moisture simply roll off.

If you don't have time or don't feel like cleaning the gun, generously moisten the bore of the barrel with BRUNOX® Gun Care, rub down the exterior with the gun care cloth, and place the gun in the gun cabinet with the muzzle facing down in a plastic drip tray until it is to be thoroughly cleaned.

For their co-operation and help to realize this instruction.

## BRUNOX® recommendation

for cleaning your gun

1. Generously spray BRUNOX® Gun Care into the barrel so that the entire length of the barrel is well moisturized with a coating of BRUNOX® Gun Care. BRUNOX® Gun Care can be applied to the entire surface with a nylon brush, with the BRUNOX® gun care cloth (cut the cloth to size and wrap it round a cleaning brush suitable for the caliber in question), or with soaked BRUNOX® gun care patches or felt cleaning pellets suitable for the caliber of the bore.
  2. Leave the barrel for 20 minutes so that BRUNOX® Gun Care can penetrate the layers to be dissolved. If you do not use BRUNOX® Gun Care regularly after shooting or are using it for the first time, you should allow it to act for a longer period of time. As the product contains no ammonia, acid or PTFE, which could cause a negative reaction, the time allowed for it to act can be as long as required.
  3. Having allowed sufficient time for the spray to act, run the bronze brush through the barrel 15 to 20 times. Clean the bronze brush with a cloth after each stroke to prevent the dirt re-entering the barrel.
  4. Then clean the bore of the barrel with a clean dry cloth, repeating the procedure using fresh cloths each time until the barrel is clean. In the event of stubborn soiling it may be necessary to repeat step 2 onwards.
  5. The barrel is then protected by wetting a section cut from the BRUNOX® gun care cloth, the last cleaning cloth used, or a cotton brush with BRUNOX® Gun Care and then by running it through the barrel.
  6. Once again, neutralize hand perspiration on all metal parts using the BRUNOX® gun care cloth. The gun is now ready to be used again. You can shoot straight away without having to regrease the barrel, but actually hitting the target is still your own problem – good shooting!
- To ensure your gun works perfectly, we recommend running a piece of BRUNOX® gun care cloth through the barrel before the first shot and during the "break-in" phase of a competition, as this ensures greater precision and allows the gun to be cleaned faster afterwards.
- BRUNOX® LUB & COR® is the 4-time test winner for corrosion protection that protects the exterior and the bore of every weapon against corrosion over the long term. We recommend using BRUNOX® LUB & COR® for long-term protection or when using the gun in coastal areas or in poor weather conditions, for example in snow or rain.

BRUNOX® LUB & COR® lubricates the firing pins, breechlocks, and slides of pistols, semi-automatic rifles, shotguns, etc.

\* Die Test-Methode: Gut entfettet wurde eine Seite der Klinge mit Tesafilm abgeklebt, auf die andere Seite wurde gemäß Anleitung Öl aufgetragen. Die „Einwirkzeit“ betrug zwölf Stunden, danach wurden die Klingen für 48 Stunden in eine zweiprozentige Salzwasserlösung gehängt.  
\*\* Spray ist in der Regel leichter als das gleiche Flüssig-Öl. Differenzen und krumme Zahlen ergeben sich auch durch verschiedene Gebindegrößen.

Test summary:

Untreated CARBON-STEEL-knife-blades exposed in a 2% salt water solution during 48 hours.

Already after 3 hours two products showed first rust.

The final results are showed in the enclosed product table.
