

## PRESS RELEASE

Best Performance – Best Design – Best Variability

### The new Walther LG400 monotec delivers best performance

Walther LG400 monotec

**Best Performance.** The new Walther LG400 monotec combines the versatile adjustment possibilities of the KK500 stock with a unique suspension to deliver consistently outstanding performance. The action is not mounted in the usual fashion on the receiver but instead on the barrel. Vibrations from firing are not transmitted to the barrel. The result is top shooting performance.

Moreover, the action can be quickly installed and removed without affecting trueness. The rifle can be sighted in simply by clamping in the monotec block. Another advantage is that it can be easily disassembled for compact transport.

**Best Design.** Thanks to the excellent ergonomics of the KK500 in the butt stock area, combined with the newly designed BIOMETRIC grip and the new aluminum butt plate, professional shooters have everything they need for a perfect firing position. In terms of design, the LG400 monotec is reduced to the essentials – a real eye-catcher and a classic example of “form follows function”.

**Best Variability.** The monotec unit is variably adjustable in length and height depending on the requirements of the discipline and the shooter’s personal preferences. With its optimized weight distribution the LG400 is also ideal for bench rest shooters.

The new monotec stock is also available as an exchangeable stock for Walther LG400, LG300 and LG200 air rifles.

**The LG400 monotec is available starting at EUR 3,999 (MSRP). The exchangeable monotec stock is available at EUR 1,998. Shipping from March 2019. For further information on the Walther LG400 monotec go to [www.carl-walther.com](http://www.carl-walther.com).**
