### Silencer Cleaning made easy

Who else, if not the inventor of the gun oil, presents at IWA an easy-to-use and effective solution for cleaning soiled silencers. In particular, non-dismountable or made of carbon silencer are difficult to clean. Filigree slats and rows of holes increase the damper performance, but make cleaning even more difficult. At the same time, weapon manufacturers confirm that damper performance decreases as pollution increases.

From now on problems of this kind as well as elaborate cleaning belong to the past. The new innovative liquid cleaner for silencers and sooted gas pressure systems from BALLISTOL automatically dissolves and neutralizes combustion residues. It is acid-free, odorless and, very important, gentle on materials.

The cleaning process itself is very simple: the silencer has to be closed from one side with a conical rubber stopper. From the other side, the damper is completely filled up with the BALLISTOL cleaner. Let the cleaner work in for 4 - 8 hours. Usage of additional tools is not necessary. The previously colorless liquid shows by means of color change a successful cleaning process. After the exposure time, rinse the silencer with clean water. Oiling when dried. That's all.

For high numbers of shots and corresponding pollution, it is recommended to prolong the exposure time for up to 24 hours. Also, warming up the damper or cleaning solution to about 45 °C before use will speed up the exposure time and increase the cleaning performance. Following that pour away the silencer cleaner and half fill the damper with clear water. Now close both sides and shake vigorously. Pour out water and repeat this process until no more solid particles are rinsed out of the silencer. The use in an ultrasonic bath is also harmless.

## Press release

BALLISTOL has been manufacturing the tried-and-tested universal oil for 115 years and is a successful company with a pioneering spirit and a high degree of innovation, which exports to more than 60 countries worldwide. The continuously expanded portfolio over the years consists exclusively of self-developed and self-produced products. In addition to the three great classics Ballistol Universal Oil, Ballistol Animal and Neo-Ballistol home remedy, the range has grown to a technology series, weapon care series, bicycle care series and many more. Today the product range of BALLISTOL embraces more than 80 products. Furthermore, in recent years, regular investments have been made in the continuous optimization of process flows as well as in the areas of further development and innovation.
