**PRIMARY ARMS OPTICS ANNOUNCES NEW
SLXZ-25 RED DOT SIGHT**

- 25mm clear aperture for maximum field of view
 - Standard 2 MOA dot or ACSS® reticle
 - Minimum optic weight and bulk
 - 12,000 hours battery life
 - Lifetime warranty

HOUSTON, TEXAS – Primary Arms announces a new medium-sized red dot unlike anything we have produced before. The all-new SLxZ-25 is part of our new Silver Line of optics, with “Zero” magnification and a full 25mm of clear aperture. Engineered in Houston, Texas, the SLxZ-25 offers a wider field of view than older 30mm red dots in a physically smaller, lightweight package. Shooters can choose a standard 2 MOA dot or an advanced ACSS reticle, powered for 12,000 hours at a median setting by a single CR2032 battery. 11 total brightness settings power the unit from night vision compatible (the lowest two settings) to daylight bright (the highest two settings). A removable Primary Arms Extreme Clamping System mount is included, and the body is compatible with industry standard micro dot mounts. The SLxZ-25 pushes our red dot technology further than ever before.

Available anodized in matte black, the SLxZ-25 is priced at \$169.99 with a 2 MOA dot and \$189.99 with the ACSS reticle.

- 2 MOA dot or ACSS reticle illuminated in red
- 2 night vision settings, 11 total brightness settings
- 12,000 hours battery life at a median setting
- Powered by 1x CR2032 battery
- Fits any industry standard micro mount
- Length: 3.01”
- Weight: 6.5 oz.
- Click value: 0.5 MOA
- Total elevation and windage adjustment: 50 MOA
- Lifetime warranty
