## traser P68 Pathfinder GMT: The Perfect Companion for Globetrotters

Fall asleep in Peru, wake up in Iceland and continue to Hawaii: globetrotters are constantly on the move and feel at home all over the world. The P68 Pathfinder GMT from Swiss watch pioneer traser is the ideal companion for anyone who has more than just one home. The new GMT watch with integrated compass ring not only shows the time in two different places, but also indicates the way – by day and by night.

Backpacking through the wild landscapes of Peru, staying overnight in a camper near the Icelandic fjords or reading a book on the beach in Hawaii? Everyone explores differently and travel has its own meaning for each of us, whether it's spontaneous or minutely planned, adventurous or relaxed. With the new GMT timepiece from the Bern-based watchmaker traser, all frequent travellers are optimally equipped for everyday life between the time zones. The P68 Pathfinder GMT offers many of the popular extras of its predecessor the P68 Pathfinder Automatic, which has made a name for itself over the years as a must-have for all outdoor enthusiasts. However, the new model series also offers the remarkable GMT function, which

is particularly popular with frequent flyers. This allows two times to be displayed simultaneously: set the time at home plus another time zone and avoid annoying mental arithmetic or dragging your loved ones out of bed back home on your next long-haul trip. And if you suffer badly from jet lag, simply set the second time to the local time of your next destination, get full of anticipation and beat fatigue.

### **Always on the right path**

Travelling is ideal for simply switching off, leaving everyday life behind and following your own spirit of adventure into the wild blue yonder. And if you happen to lose your way between a snowstorm and a cloudless sky while hiking in Iceland, the reliable companion on your wrist will help you. Using the integrated compass ring, the position of the sun and the hour hand, with the traser P68 Pathfinder GMT the own position can be easily determined, even in the remotest places with no mobile phone reception. If the sun has already set, the P68 Pathfinder GMT brings light into the darkness: the hands and indexes of the traser watch are lit up even in complete darkness thanks to the in-house developed trigalight self-powered illumination technology. This guarantees perfect readability of the time even at night and in poor visibility. Looking for more adventure on your next trip? The P68 Pathfinder is water-resistant to 10 bar, and the anti-reflective sapphire glass means the robust timepiece and the precise Swiss movement inside are protected against falls.

Whether you're heading out to sea to relax or searching for adrenalin in the wilderness, the GMT function from Swiss watch pioneer traser adds extra value to everyday life between the time zones with the indispensable companion – the P68 Pathfinder GMT. The new model will be available by mid November in green and blue.

### About traser swiss H3 watches – #theoriginal #unlimited #illumination

**traser** swiss H3 watches are developed and manufactured under the SWISS MADE quality label in Niederwangen near Bern, Switzerland. traser watches have a unique feature: permanent and consistent legibility of the time in total darkness and under adverse visibility conditions. This is achieved with trigalight self-powered illumination tubes developed in-house. They require no external energy and deliver constant luminescence by day and by night for over ten years.

Customers around the world (among them active people, adventurers, keen sportspeople, nature lovers or professionals in tactical roles and special forces units) rely on the ruggedness and functionality of traser watches.
