ENDURA® 4 DELICA® 4 ENDELA™ K390

SIGNATURE SERIES

PRODUCT PHOTOS

\$165.00 - \$190.00 MSRP

K390 MICROCLEAN® is a state-of-the-art tool steel developed to provide the extreme wear resistance and high compressive strength needed for demanding industrial applications. Enriched with vanadium, tungsten, molybdenum, and cobalt, when used in knife blades, its exceptional toughness and wear resistance lend themselves well to thin, high-performance edges—including the teeth of serrated edges. The new fully serrated versions of Spyderco's popular Delica 4, Endela, and Endura 4 take full advantage of K390's remarkable properties by offering the voracious cutting power of a SpyderEdge™ cutting edge and add the low-friction edge geometry of a full-flat grind. All other features are consistent with the time-tested standard versions of these designs, including a fully accessible Trademark Round Hole™ for ambidextrous, one-handed deployment, skeletonized stainless steel liners, a sturdy back lock mechanism, fiberglass-reinforced-nylon (FRN) handle scales, and a four-position pocket clip. To distinguish them as members of Spyderco's K390 family, their Bi-Directional Textured FRN handles are molded in the distinctive blue color of the breed.
