## STALON RF IS BETTER THAN ANY PREVIOUS RIMFIRE SILENCER

”Better than anything else we previously developed for rimfire calibers”. That’s what Stalon Silencer says about their new Stalon RF, the latest addition to the silencer family that doesn’t only match a great number of calibers but also reduces noise by 29,9 decibels.

Stalon has developed a new silencer for rimfire cartridges which was released in October 2022. It is called Stalon RF and is, unlike its predecessors, adapted for all .17-.22 rimfire cartridges. The previous models RM and RC in Stalon’s rimfire series were different in size and noise reduction, while RF matches perfectly with all rimfire cartridges and still reduces noise nearly the same amount despite caliber. Thanks to RF’s front-mounted design it can be installed on any weapon where it’s not possible to attach a telescopic silencer. Because of Stalon RF’s many advantages, only one model of silencer is needed for all rimfire guns and pistols.

Stalon RF offers incredible performance with noise reduction of up to 8,1 decibels better than previous models for rimfire cartridges. Stalon is known for light, efficient and flexible silencers. RF is no exception with its pity 96 grams and is the perfect choice for target shooting, small wild game, and shooting practice.

Read more about Stalon RF here: <https://stalonsilencer.com/products/stalon-rf-silencer/> or visit Stalon Silencers at IWA Outdoor Classics in showcase 3C-200 and discover RF yourself.

Technical data:

Noise reduction - 29,9 decibels (cal .22lr pistol)

Diameter: 31,5 mm

Weight: 96 grams

Length: 117 mm (forward)
