

Reliable scout in ultra-sharp 4K quality

The Braun Scouting Cam Black400 WiFi 4K for reliable hunting ground and property surveillance

- 4MP CMOS image sensor
- Video resolution up to 4K at 30 frames per second
- WiFi function
- 42 Black IR LEDs for day and night shots
- Photo resolution up to 30MP
- 120° detection angle
- Tripping time 0.4 seconds
- Triggering distance up to 22 m
- 2.4" TFT color display
- Storage on micro SD card (up to 128 GB)
- Weight only 268g
- time-lapse recordings
- integrated microphone and speaker

With the help of wildlife cameras, forest rangers and hunters gain valuable insights into their hunting grounds. But camera traps can also be used to monitor objects such as allotment gardens or garages and to protect against theft and vandalism. The new Braun Scouting Cam Black400 WiFi 4K was specially developed for surveillance tasks. Videos can even be recorded in high 4K Ultra HD resolution at 30 photos per second (fps), while photos with a maximum image resolution of up to 30 MP are no problem.

The integrated WiFi module of the Braun Scouting Cam Black400 WiFi 4K enables a direct connection from the camera to the smartphone. The recordings can be viewed, downloaded and deleted using the free app. The annoying removal of the memory card is no longer necessary. The app also enables a live preview with the option of manual image and video recording. In addition to convenient data transfer, the system settings of the wildlife camera can also be managed using the WiFi connection and app. The exact resolution of the photos and videos, as well as numerous other parameters, can be set via the connected smartphone and the app.

Settings can also be made directly on the camera using the control panel and the 2.4" TFT color display. The recordings can also be viewed conveniently and directly on the color display. The video resolution can vary from 4K (at 30fps) to 2.7K up to 1080p/720p/480 (each also with 30fps). The image resolution can be set between 30 to 1MP. The Braun Scouting Cam Black400 WiFi 4K also has three integrated PIR motion sensors with three different sensitivities, a detection angle of 120 degrees, a trigger distance of up to 22 meters and a trigger time of around 0.4 seconds.

Thanks to the built-in black LEDs and the 4MP CMOS image sensor, both realize high-quality day and night shots. The recordings can be saved on a micro SD memory card with a maximum of 128GB. In addition, the new wildlife camera also has a micro USB slot for connecting to the PC.

In addition, the new game camera Braun Scouting Cam Black400 WiFi 4K has an integrated microphone, a speaker, password protection, a time-lapse mode, as well as an indication of the date, time, moon phase and temperature. Thanks to a mounting strap and a practical tree mount, the robust and splash-proof (IP65) trail camera can be easily attached to the desired

location. The operating temperatures range from -20°C to $+60^{\circ}\text{C}$. The standby time is around six months. Eight AA batteries are used for power supply. Optionally, the camera can also be powered via a 6V 1.5A power supply unit.
